

Database Export – Laragon

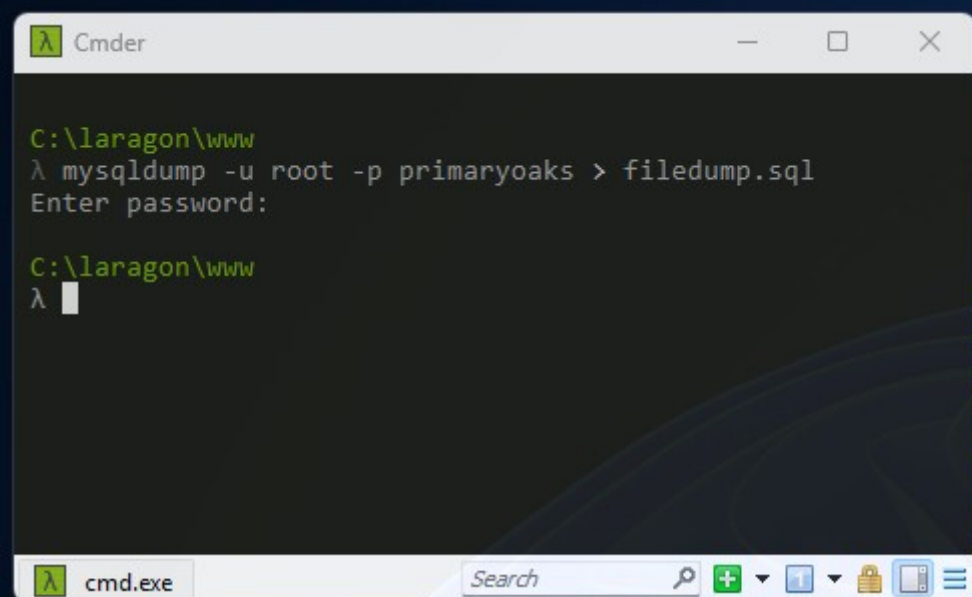

On Laragon:

- Ensure Laragon is open and mysql is running
- Click “Terminal”

On the terminal:

- A terminal will open, type the shown command
- “primaryoaks” should be the name of your database.

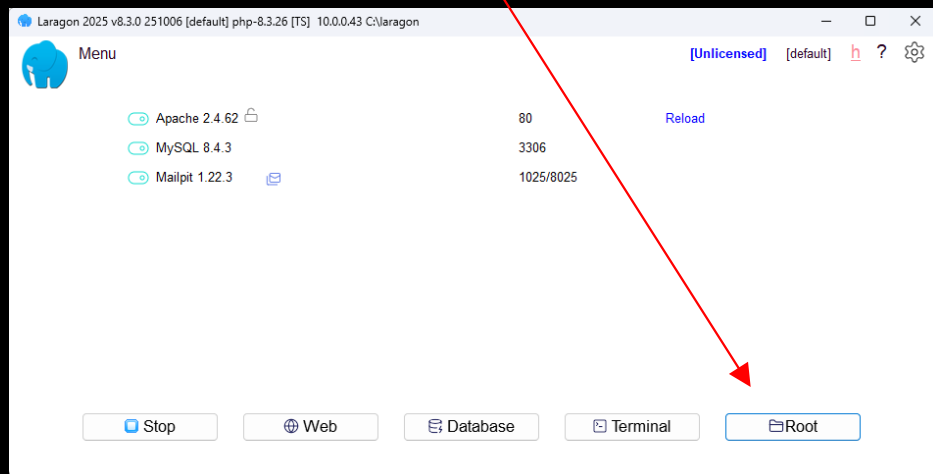

```
C:\laragon\www
λ mysqldump -u root -p primaryoaks > filedump.sql
Enter password:

C:\laragon\www
λ
```

The screenshot shows a Windows Command Prompt window with the title bar 'Cmder'. The command prompt is at the directory 'C:\laragon\www'. The user has entered the command 'mysqldump -u root -p primaryoaks > filedump.sql', which prompts for a password. The prompt is currently at the second line, ready for input.

Back to Laragon

- Click on Root

- Cut and move your sql dump to your project.
